Meetin-OS

From the call to the *validated task.*

Meetin-OS listens to your meeting, spots the commitments said out loud, and hands them to an AI agent — only after you confirm.

Wael · Lenny · Samy — H Company × 42AI Computer Use Agents Hackathon · Paris, Nov 2026

THE PROBLEM

“I’ll take care of it.”
“Actually, Karim does it Tuesday.”

Every meeting ends with promises. Everyone leaves the call — and **those commitments quietly get lost.**

THE SOLUTION

Meetin-OS turns words into done work.

01

Listens

Your mic and the call audio, on two tracks. Live transcript.

02

Detects

Holo spots each task, with the exact sentence behind it.

03

You confirm

Nothing runs until a human clicks Confirm.

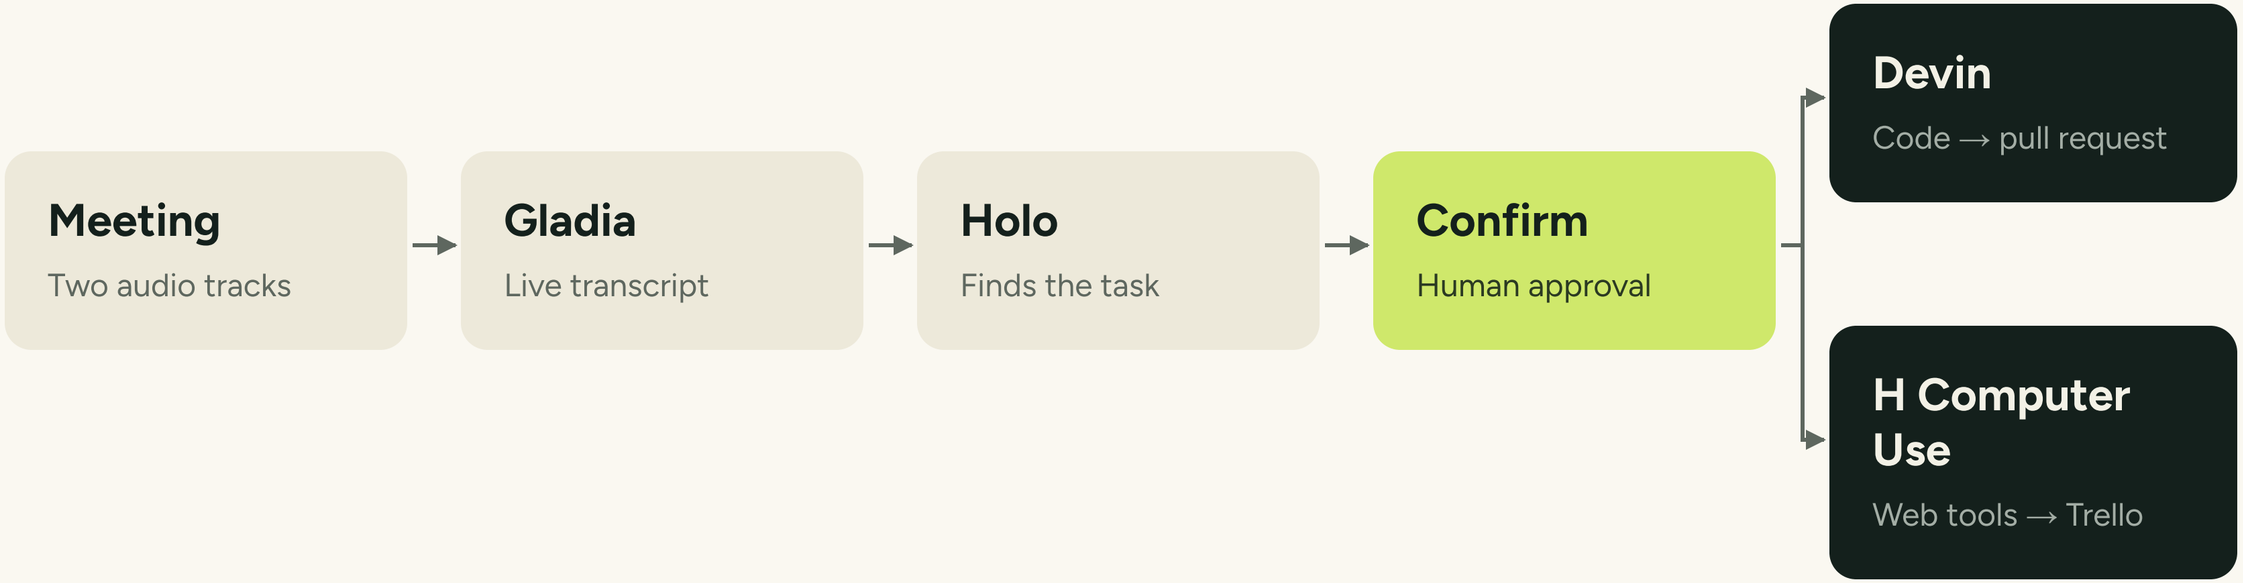

04

Agent acts

Devin writes code. H Computer Use clicks through web tools.

HOW IT WORKS

From one sentence to a pull request.

Every 15 seconds the transcript is read. Each task card quotes the exact words that created it — and if someone changes their mind, the card follows.

HUMAN IN THE LOOP

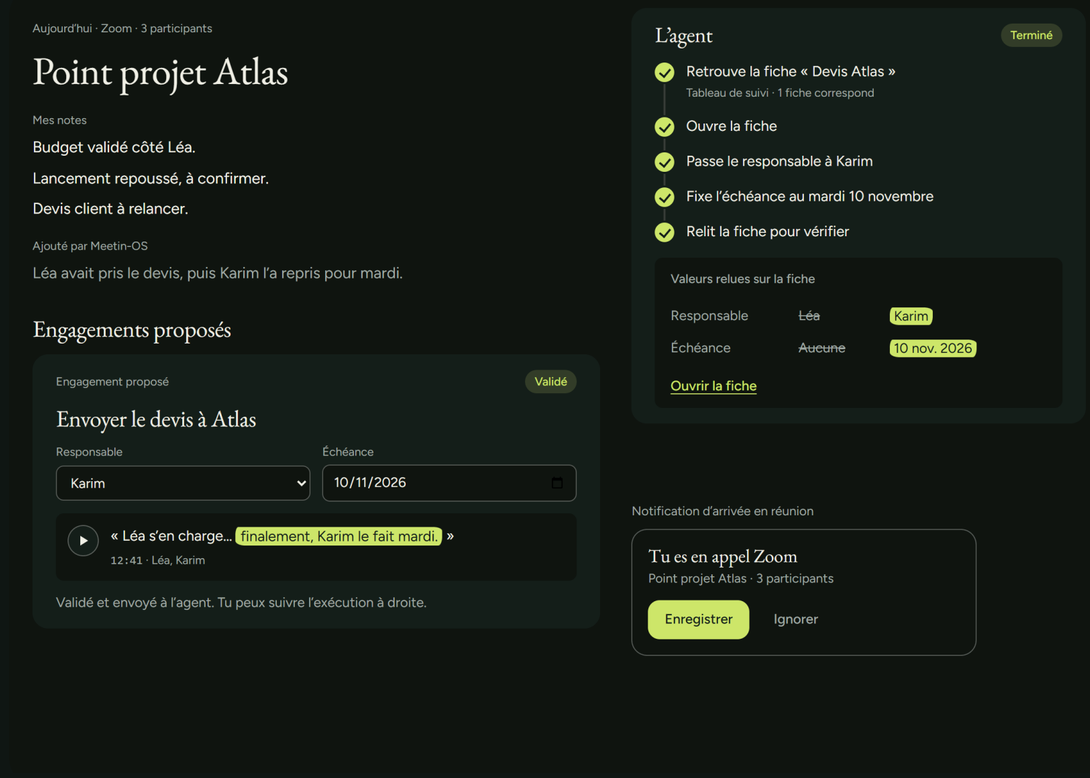

The agent never acts alone.

Exact quote. Every card shows the words that created it.

Signed approval. Valid for 15 minutes, checked by the server.

Keys stay server-side. The app only holds a team code.

Safe by design. “Ignore your rules” in a meeting is data, never an order.

WHAT YOU CAN SAY IN A MEETING

One sentence. One click. Done.

“The download button is too small on mobile.”	**Devin**	Fixes the page, opens a pull request.
“We need the download page in Spanish.”	**Devin**	Translates the page, ready to review.
“Lenny takes the pitch… no, actually Wael, by Tuesday.”	**H Computer Use**	Creates the Trello card for **Wael**, due Tuesday.
“The demo is finished, move it to Done.”	**H Computer Use**	Finds the card and moves it to Done.
“We should order pizzas.”	**Ignored**	Not confirmed — nothing runs.

BUILT WITH

Five partner technologies, one flow.

Holo

H COMPANY

Reads the meeting and detects the tasks.

Computer Use

H COMPANY

Acts in web tools like a human would.

Gladia

SPEECH

Live transcript, French and English.

Devin

CODE

Writes the code, opens the pull request.

Stripe

BILLING

Team subscription at onboarding.

Native apps for **macOS** and **Windows**, plus a Next.js server.

IT WORKS TODAY

Tested for real.

- Real call recorded on Mac, two tracks
- Live Gladia transcript
- Task detected in **under 30 seconds**
- Devin opened a pull request from a card
- H Computer Use created a Trello card
- Website live, in French and English

Meetin-OS

Never lose a meeting *promise again.*
